Information

Information

This page contains all the problems for this test. The very last problem asks you to contact the person in charge of the exam and tell him or her the 4-digit key given in the problem text. In return you will be given a 5-digit signing code which you must give as the answer to the problem.

This problem does not count towards the final score, but **tests missing this code will not count towards the final grade.**

The following rules apply:

- Total time allowed: 30 minutes. The test will automatically close if time runs out.
- UiA's usual rules in regards to cheating on exams apply.

Question **1**

Incorrect

Mark 0.00 out of 1.00

Consider the recurrence relation

$$30 \cdot a_n + 4 \cdot a_{n-1} + 3 \cdot a_{n-2} = 0.$$

Let $\{a_n\}_n$ and $\{b_n\}_n$ be two numerical sequences. We say that a_n is a solution if the sequence $\{a_n\}_n$ satisfies the recurrence relation, and likewise for b_n .

Select every statement below which is true, and leave the false statements unchecked.

- ☒ If a_n is a solution, and $a_2=a_3=0$, then $a_n=0$ for each $n \geq 1$.
- ☒ a_n and b_n are solutions, and if $a_2=b_2$, then $a_n=b_n$ for each $n \geq 1$.
- ☐ If a_n is a solution and $b_n = -a_n$, for each n , then b_n is also a solution.
- ☐ If $a_0=1$, $a_1=-1$, then a_n can not be a solution.
- ☐ If $a_0=-1$, $a_1=1$ then a_n can not be a solution.
- ☒ If a_n is a solution, and $a_0=5$ and $a_1=4$, then a_n is an integer for each $n \geq 1$.
- ☐ None of the above

Question **2**

Incorrect

Mark 0.00 out of 1.00

Let $(D_3, \cdot)$ be the dihedral group of symmetries of the regular triangle. We label the vertices of the triangle 1, 2, 3 in a counter-clockwise manner. The symmetry $r1$ is rotation by 120 degrees, sending vertex 1 to vertex 2. The symmetry $r2$ is rotation by 240 degrees. The element $t1$ is the reflection symmetry that fixes vertex 1, and likewise for $t2$ and $t3$.

The multiplication table for this group looks like

id	r1	r2	t1	t2	t3
r1	r2	id	t2	t3	t1
r2	id	r1	t3	t1	t2
t1	t3	.	.	.	r1
t2	t1	.	.	.	r2
t3	t2	.	.	.	id

However, we have left out 9 entries in the places marked by dots.

Find the entire multiplication table for D_3 .

Syntax help: Remember that we compose symmetries from left to right. So if a and b are two symmetries, then the composite $a \cdot b$ is the symmetry that first applies a , and then b .

$t2 \cdot t2 =$

t2

$t3 \cdot t2 =$

t1

$t1 \cdot t2 =$

t3

$t2 \cdot t1 =$

t3

$t3 \cdot t1 =$

t2

$t1 \cdot t1 =$

t1

$t2 \cdot r2 =$

r2

$t3 \cdot r2 =$

r2

$t1 \cdot r2 =$

r2

Question 3

Incorrect

Mark 0.00 out of 1.00

a) Let $G = (\mathbb{Z}/2)^{\times 5}$, and let $H \subset G$ be the subgroup

$$H = \{[0, 0, 0, 0, 0], [0, 0, 0, 1, 0], [0, 0, 1, 0, 1], [0, 0, 1, 1, 1]\}.$$

What is the index of $H \subset G$?

$$[G : H] = 7777777777777777$$

Your last answer was interpreted as follows:

7777777777777777

b) Let D_4 be the dihedral group of order 8 of symmetries of the unit square centered at the origin of $\mathbb{R}^2$. Let $\sigma \in D_4$ be the symmetry that reflects around the line $(y=-x)$.

Compute the index of the subgroup generate by σ :

$$[D_4 : \langle \sigma \rangle] = 42$$

Your last answer was interpreted as follows:

42

Question 4

Correct

Mark 0.00 out of 0.00

Signing code

Before closing the test you must answer this problem with a signing code given to you by the person in charge of the test.

Tests missing this signing code will be ignored and will not count towards the final score.

Key: 436

Signing code: 31647

Your last answer was interpreted as follows:

31647
