Status	Finished
Started	Thursday, 6 November 2025, 12:45 PM
Completed	Thursday, 6 November 2025, 1:13 PM
Duration	28 mins 8 secs
Marks	3.00/3.00
Grade	3.00 out of 3.00 (100%)

Information

Information

This page contains all the problems for this test. The very last problem asks you to contact the person in charge of the exam and tell him or her the 4-digit key given in the problem text. In return you will be given a 5-digit signing code which you must give as the answer to the problem.

This problem does not count towards the final score, but **tests missing this code will not count towards the final grade.**

The following rules apply:

- Total time allowed: 30 minutes. The test will automatically close if time runs out.
- UiA's usual rules in regards to cheating on exams apply.

Question **1**

Correct

Mark 1.00 out of 1.00

The following sequence

$$p_n = -\frac{3 \cdot 5^{n+1}}{8}$$

is a particular solution to the recurrence relation

$$-\frac{a_n}{3} - 5^n - a_{n-1} = 0.$$

a) Find another solution to the recurrence relation, not equal to p_n :

$$a_n = \frac{-(3 \cdot 5^{n+1})}{8} + (-3)^n$$

Your last answer was interpreted as follows:

$$-\frac{3 \cdot 5^{n+1}}{8} + (-3)^n$$

The variables found in your answer were: $[n]$ **Syntax guide:** Your answer should be an expression which depends on the variable n , and *no other constants*. E.g. if you think the answer is

$$-7 \cdot \frac{2^n + 1}{3n},$$

you should type **$-7 \cdot (2^{n+1}) / (3 \cdot n)$** .b) Given the initial condition $a_0 = \frac{1}{8}$. Compute a_n for $n = 1$:

$$a_1 = -123/8$$

Your last answer was interpreted as follows:

$$\frac{-123}{8}$$

Question **2**

Correct

Mark 1.00 out of 1.00

Consider $G = S_3$, the symmetric group of permutations of 3 symbols.Recall that a subgroup $H \subseteq G$ is called *non-trivial* if $H \neq \{e\}$, and *proper* if $H \neq G$.

Select every statement below which is true, and leave the false statements unchecked.

- ☒ The group G is not abelian.
- ☒ The group G has a non-trivial and proper subgroup.
- ☐ There exists an element $g \in G$ such that the order of the subgroup $\langle g \rangle$ equals the order of G .
- ☐ The order of G is 12.
- ☐ The group G is infinite.
- ☐ None of the above

Question **3**

Correct

Mark 1.00 out of 1.00

Let $(P_8, \bullet_8)$ be the group of natural numbers coprime to 8 with group operation given by multiplication modulo 8. The multiplication table for this group looks like

	1	3	5	7
3	.	.	.	.
5	.	.	.	.
7	.	.	.	.

However, we have left out 9 entries in the places marked by a dot "."

Compute the missing entries in the group multiplication table:

$3 \bullet_8 7 =$	5
$7 \bullet_8 7 =$	1
$5 \bullet_8 7 =$	3
$3 \bullet_8 5 =$	7
$7 \bullet_8 5 =$	3
$5 \bullet_8 5 =$	1
$3 \bullet_8 3 =$	1
$7 \bullet_8 3 =$	5
$5 \bullet_8 3 =$	7

Your last answer was interpreted as follows:

5

Your last answer was interpreted as follows:

1

Your last answer was interpreted as follows:

3

Your last answer was interpreted as follows:

7

Your last answer was interpreted as follows:

3

Your last answer was interpreted as follows:

1

Your last answer was interpreted as follows:

1

Your last answer was interpreted as follows:

5

Your last answer was interpreted as follows:

Question 4

Correct

Mark 0.00 out of 0.00

Signing code

Before closing the test you must answer this problem with a signing code given to you by the person in charge of the test.

Tests missing this signing code will be ignored and will not count towards the final score.

Key: 135

Signing code:

Your last answer was interpreted as follows:

35489
